

Hi There

Our team kicks off the construction season with a complete website re-launch, new products and services. Our new site is packed with product information, on-line catalogues, news and an online shopping cart.

The new GRS-1 A World First and industry leader from day one

We are excited to introduce a brand new GNSS Rover receiver, one we know will change the world of RTK positioning forever. The lightweight GRS-1 is an all-in-one field controller and RTK (L1 & L2) dual constellation (GPS/GLONASS) receiver. RTK corrections can be received by either using the built-in GSM modem or placing the unit in the optional radio cradle. Other features include a built-in GNSS (L1) GPS/GLONASS antenna, digital camera with flash, digital compass, Wifi, Bluetooth, USB and 1GB RAM.

Product Promotions

As part of the re-launch we are offering special discounts on selected products. These promotions offer massive savings. Place your order today as stocks are limited.
